

Inhaler carbon footprint comparison tool

Your doctor, nurse or pharmacist will use this table to help you choose a more environmentally friendly inhaler that is good for you and the environment.

The NHS supports the change to more an environmentally friendly inhaler if this is the right choice for you. NHS research has shown that people are willing to change to a more environmentally friendly inhaler.

How to use the inhaler carbon footprint table

- Inhalers have been put into alphabetical order by inhaler name in the contents list. There is also a list of inhaler types. These lists are interactive, so when you click on the inhaler brand or type you wish to view, you will automatically jump to that page.
- The table includes photos of the inhalers, a list of their active ingredients, and the type of inhaler.
- The symbol next to the inhaler indicates whether it has a:

Low (green) carbon footprint

Medium (orange) carbon footprint or

High (red) carbon footprint

- Inhalers with a green low carbon footprint are more environmentally friendly.

Using this tool with your doctor, nurse or pharmacist means you can talk about which environmentally friendly inhalers may be suitable for you to consider.

Which inhaler devices are less environmentally friendly?

Metered dose inhalers (MDIs), sometimes called 'pumps' or 'puffers' are less environmentally friendly. They contain a gas (propellant) that is a powerful greenhouse gas which adds to global warming. They have a red high carbon footprint symbol next to them in the table.

Some metered dose inhalers have less of the greenhouse gas in the inhaler or use a gas that has a very low carbon footprint. They have an orange medium carbon footprint symbol or green low carbon footprint next to them in the table.

Which inhaler devices are more environmentally friendly?

Dry powder inhalers (DPIs) or soft mist inhalers (SMIs) do not contain greenhouse gases and so have a lower carbon footprint. They are more environmentally friendly and have a green low carbon footprint symbol next to them in the table.

What should I do if I need to use a high carbon footprint inhaler and I am concerned about the environment?

It is really important to keep taking the medicines that you need, particularly your steroid preventer and reliever medicines to treat symptoms and asthma attacks. You may have one combination inhaler with both medicines in or two separate inhalers.

There are still steps you can take to reduce the carbon footprint, like:

- Ensuring you use your inhaler with good technique.
- Using your inhaler until empty and know how to tell when your inhaler is empty.
- Return your empty or no longer needed inhalers to a community pharmacy or dispensary for environmentally friendly disposal.
- Keeping physically active and stopping smoking are also really important ways to improve your lung health without relying on medicines.

Symbols, abbreviations and terms used in this tool

	Low carbon footprint inhaler
	Medium carbon footprint inhaler
	High carbon footprint inhaler
AIR therapy	Anti-inflammatory reliever therapy
BA-pMDI	Breath actuated pressurised metered dose inhaler
Bronchodilator	Bronchodilators help the muscles around the airways to the lungs relax, to keep them open and stop them getting tight. This helps air get in and out of the lungs better to make breathing easier.
DPI	Dry powder inhaler
ICS	Inhaled corticosteroid. Also known as a steroid inhaler or preventer inhaler, keeps inflammation down in the airways which lowers the risk of symptoms and asthma attacks.
LABA	Long-acting beta-2 agonist. LABA inhalers are like SABA inhalers, but their effects last longer and they may not start to work as quickly. They contain different medicines compared to SABA inhalers.
LAMA	Long-acting muscarinic antagonist. LAMA inhalers are like SAMA inhalers, but their effects last longer and they may not start to work as quickly. They contain different medicines compared to SAMA inhalers.

MART	Maintenance and reliever therapy. Inhaler strengths that can be used in asthma MART regimes are listed in the table.
pMDI	Pressurised metered dose inhaler
SABA	Short-acting beta-2 agonist. SABA inhalers contain a medicine that relaxes the muscles in your lungs and so open up your airways. They make it easier to breathe or stop you from wheezing. The medicine in the inhaler is either salbutamol or terbutaline.
SAMA	Short-acting muscarinic antagonist. SAMA inhalers relax the muscles in your lungs and so open up your airways. They contain a medicine called ipratropium.
SMI	Soft mist inhaler
Triple therapy	ICS+LABA+LAMA

Images in this document were provided by manufacturers where these were available. Where companies did not supply images or did not have these available, images have been taken from the Rightbreathe website (<https://www.rightbreathe.com/>) and we would like to acknowledge use of these.

Finding inhalers

There are different ways to move around this inhaler document.

- You can use the alphabetical list of inhalers below. Click on the inhaler to go to the correct page.
- Alternatively you can click on type of inhaler buttons on the next page.
- Every page has a footprint at the bottom, which allows you to return to this contents page. It also has the type of inhaler buttons at the top of the page, which allow you to move directly to different types of inhalers pages.

Navigate to inhaler type

Don't forget that:

- The inhaler type headings on every page will take you to that inhaler type, which are listed alphabetically.
- You can click on the footprint icon on the bottom of every page to return to the start of the alphabetical inhaler list contents page.

Short-acting beta-2 agonist (SABA)

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
Airomir® 100 micrograms pMDI		medium 	Salbutamol	SABA - reliever
Airomir® Autohaler® 100 micrograms BA-pMDI		medium 	Salbutamol	SABA - reliever
Bricanyl® Turbohaler® 500 micrograms DPI		low 	Terbutaline	SABA - reliever
Easyhaler® Salbutamol 100 micrograms DPI		low 	Salbutamol	SABA - reliever
Easyhaler® Salbutamol 200 micrograms DPI		low 	Salbutamol	SABA - reliever
Salamol® Easi-Breathe® 100 micrograms BA-pMDI		medium 	Salbutamol	SABA - reliever
Salamol® CFC-Free inhaler 100 micrograms pMDI		medium 	Salbutamol	SABA - reliever
Salbulin® Novolizer® 100 micrograms DPI		low 	Salbutamol	SABA - reliever

Short-acting beta-2 agonist (SABA)

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
Ventolin® Accuhaler® 200 micrograms DPI		low CO ₂ 	Salbutamol	SABA – reliever
Ventolin® Evohaler® 100 micrograms pMDI		high CO ₂ 	Salbutamol	SABA – reliever

Short-acting muscarinic antagonist (SAMA)

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
Atrovent® 20 micrograms pMDI		high CO ₂	Ipratropium bromide	SAMA
Inhalvent® 20 micrograms pMDI		high CO ₂	Ipratropium bromide	SAMA

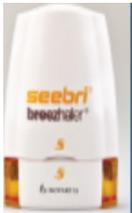

LABA

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
Atimos® Modulite® 12 micrograms pMDI		high CO ₂	Formoterol	LABA
Easyhaler® Formoterol 12 micrograms DPI		low CO ₂	Formoterol	LABA
Onbrez® Breezhaler® 150 or 300 micrograms DPI		low CO ₂	Indacaterol	LABA
Oxis® Turbohaler® 6 micrograms DPI		low CO ₂	Formoterol	LABA
Oxis® Turbohaler® 12 micrograms DPI		low CO ₂	Formoterol	LABA
Serevent® Accuhaler® 50 micrograms DPI		low CO ₂	Salmeterol	LABA
Serevent® Evohaler® 25 micrograms pMDI		high CO ₂	Salmeterol	LABA
Soltel® CFC free 25 micrograms pMDI		high CO ₂	Salmeterol	LABA

LABA

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
Striverdi® Respimat® 2.5 micrograms SMI			Olodaterol	LABA

LAMA

Inhaler brand name	Inhaler image	Carbon footprint	Active ingredient(s)	Type of inhaler
